

Blocked .CHM Files

Downloading a CHM file from the internet will flag the file for Windows Explorer. For security, the downloaded file is prevented from accessing any web files. Because the CHM file consists of HTML files, it is prevented from displaying them. This will create a parts manual that will not display topics and state that "Navigation to the webpage was cancelled".

This can be fixed quickly by altering the file's properties in Windows Explorer.

To "unblock" the file,

1. Open Windows Explorer
2. Find the CHM File
3. Right-click and select Properties
4. Click the **Unblock** button on the General tab
5. Click **OK**

The file is now completely usable.
