Configuring the Windows Environment

Configuring your Windows environment will require slightly different steps depending on your Windows operating system. All Windows environments will require the adjustment of the network bindings. This will optimize the communication between the PC and the AMAYA.

Please follow the steps for your operating system.

- ☑ Windows 8
- ☑ Windows 7
- ✓ Windows Vista
- ☑ Windows XP

Windows RT does not allow the loading of software other than apps from the Windows Store. It will not work with DesignShop or AMAYA OS.

Configuring the Windows 8 Environment

Configuring the Windows environment will require two actions.

- 1. Adjusting the User Account Controls (UAC)
- 2. Configuring the network environment

The following sections will walk you through both parts and enable the computer and AMAYA to communicate more efficiently.

Because this portion of the setup will require you to restart your computer, you can download these instructions and print them off to have easier access for the configuration of the Windows environment and loading of Melco software.

Adjusting the User Account Controls in Windows 8

Adjusting the User Account Controls in Windows & allows for better communication between DesignShop and AMAYA OS.

1. From the start screen in metro mode, right-click on the background and select **All apps** from the bar across the bottom of the screen.

2. Scroll over and select the Control Panel under "Windows System".

- 3. Within Control Panel, you may set your view by "Category", "Large Icons" or "Small Icons".
 - If in "Category View", click on User Accounts and in the next window, click on User Accounts again.

o If in either of the icon views, click on **User Accounts**. You may have to scroll to find

4. Click on Change User Account Control settings.

5. Move the slider all the way down to "Never Notify", then click OK.

Tell me m Always	ore about Us	er Account Control setting	
- 1	-	Never notify me when:	
- 2	-	Apps try to install software or make changes to my computer Imake changes to Windows settings	
	-		
-0	2-	O Not recommended.	
Never	notiły		

6. The User Account Control settings have now been adjusted.

Configuring the Windows 8 Network Environment

1. From the start screen in metro mode, right-click on the background and select **All apps** from the bar across the bottom of the screen.

2. Scroll over and select the **Control Panel** under "Windows System".

- 3. Within Control Panel, you may set your view by "Category", "Large Icons" or "Small Icons".
 - $\circ~$ If in "Category View", click on <code>View network status and tasks</code> under

"Network and Internet".

 If in either of the icon views, click on **Network and Sharing Center**. You may have to scroll to find it.

4. Click on Change Adapter Settings.

5. Right-click on the Ethernet adapter for your AMAYA network and select **Properties**.

6. Click on **Configure**.

9. The Windows network environment has now been configured for your AMAYA.

Loading the Software

Loading the software onto the PC requires the use of a DVD drive. Once the DVD is inserted, the software installer will usually walk you through the loading process step by step.

Because this portion of the setup will require you to restart your computer, you can download these instructions and print them off to have easier access for the configuration of the Windows environment and loading of Melco software.

Security Keys (Dongles)

When looking at the DVD, understand that it contains many different programs from Melco. If you purchased DesignShop Pro+, but the disk only says "DesignShop", do not worry. All levels of the software are contained on the disk. It is the security key, or dongle, that controls the level. The security keys will be asked for during the installation process. However, not all levels of software require the dongles.

Installing the Software

To install the AMAYA OS software, insert the DVD into the DVD drive of your PC. Most PCs will automatically run the DVD and begin the installer. From here, walk through the steps as prompted by the installer.

Run the Setup

1. If the DVD did not begin running, an AutoPlay window will pop up. Choose the "Run setup.exe" from the options provided.

Install the Security Key Drivers

If this is the first time installing the software, a window will pop up asking about security keys. If your level of software requires security keys and they came with your software, click Yes. If you are not running software that requires a security key, click No.

 A warning will pop up asking you to attach the security key(s). When you attach them to your computer, the computer may try to automatically load drivers. Should any "Hardware Found" notices occur, please cancel them.

3. Attach your security key(s). The keys will be labeled with a tag. The tag will specified which software it is for and the serial number.

4. If a "Hardware Found" notice should occur, please cancel it or close it.

5. A question window will pop up asking you to verify that you attached the security keys. Click **Yes**.

6. A warning will pop up stating that the install process will begin. Click **or** to begin the installation.

Warning	×
	The security key device driver will now be installed. When finished, please reboot the PC and start the install process again.
	ОК

7. If a window stating that the program might not have installed correctly pops up, please cancel it.

8. In the Sentinel Protection Installer window, click **Next** > to begin the installation of the security key drivers.

	Welcome to the InstallShield Wizard for Sentinel Protection Installer 7.5.0
Sentinel.	The InstallShield(R) Wizard will install Sentinel Protection Installer 7.5.0 on your computer. To continue, click Next.

9. Continue the installation process.

10. Click **Finish** to complete the installation of the drivers, and exit the wizard.

11. Restart your computer before installing the rest of your software.

Install AMAYA OS

Once the computer has been restarted, you may continue installing software.

- 1. If the DVD did not begin running, eject and reinsert it. An AutoPlay window should pop up. Choose the "Run setup.exe" from the options provided.
- 2. In a new installation of Windows 8, you may be asked to install the .NET Framework. Please choose to "Download and install this feature".

3. In the setup window, check only the software that you purchased from Melco. Note that the software names are not level-specific. Placing a check mark beside "AMAYA - AMAYA OS" will load AMAYA OS Lite, SE, or Flex+ depending on the presence or level of your security keys. The same applies for DesignShop.

Since you are installing AMAYA OS, make sure that is checked. If you purchased and would like to install DesignShop as well, check that too.

Select the applications you wish	to install

Install DesignShop

If continuing from the AMAYA OS Installation, skip to step 5.

- 1. If the DVD did not begin running, eject and reinsert it. An AutoPlay window should pop up. Choose the "Run setup.exe" from the options provided.
- In the setup window, check only the software that you purchased from Melco. Note that the software names are not level-specific. Placing a check mark beside "AMAYA - AMAYA OS" will load AMAYA OS Lite, SE, or Flex+ depending on the presence or level of your security keys. The same applies for DesignShop.

Since you are installing DesignShop, make sure that is checked.

Security Keys

Depending on the level of your software, you have received security key(s). The software installer will load drivers for them and then ask that you plug them into your computer.

As these security keys allow your software to run in the level you purchased, it is extremely important that they not be lost.

If you are unsure of the level of software purchased, or the need of security keys, a table can be found in the software levels section.

AMAYA OS Software Levels

AMAYA OS comes in multiple levels. Each level has different features and requirements. Check with your Melco sales representative for the level that best suits your needs.

Software Level	Description	Dongle Required
AOS Lite	The lightest version of the AMAYA OS software line. This version is most commonly used to communicate with BRAVO machines.	NO
AOS SE	Used for single machines or to network a few BRAVO machines.	YES*
AOS Flex+	The most powerful of the AMAYA OS software line. This level of software has access to all major features. Flex+ can be used to network many machines. It can be used with all AMAYA machines except the BRAVO.	YES*

* With the AOS V10 security key attached to your computer, you can also load DesignShop Lite without needing an additional DesignShop security key.
